

How does the Halo™ UV-ST Ultraviolet Vacuum stand up against other vacuums in terms of suction power?

We designed the Halo UV-ST ultraviolet vacuum to be a powerful, high performance vacuum cleaner. The Halo UV-ST was built to outperform many of the leading vacuum cleaners on the market, and the suction power and performance has been laboratory tested to exceed those specs.

How does the Halo UV-ST perform in comparison to other popular vacuums on the market?

The Halo UV-ST meets or surpasses the standards of leading vacuum cleaners in the market and offers the unique germicidal power of ultraviolet light to safely kill micro-organisms in the home. In our continuing efforts to provide the utmost quality and comfort for our customers, we have taken great measures to create our products with the highest standards in mind.

- Our UV-C light bulb is covered under a lifetime guarantee and should not need replacing during the life of your vacuum as long as your vacuum is operated as outlined in our Owner's Safety and Operation Manual.
- We have designed and tested our vacuums to perform for over 600 hours, about twice as long as the testing performed by most other vacuum companies.
- We utilize the highest rating HEPA filters in our units, mirroring the requirements used in military fighter jets for their air purification.
- Experts agree that bag vacuums produce the most hypoallergenic cleaning solution. While most bag vacuums use paper bags to collect dirt in their vacuums, Halo uses a higher quality cloth bag to provide the most hypoallergenic solution.
