GENERAL SAFETY INSTRUCTION

Fans are UL/cUL Listed, Standard 705.

1. Do not depend on any switch as the sole means of disconnecting power when installing or servicing the fan.
2. Always disconnect, lock-out, and tag-out power source before installing or servicing. Failure to disconnect power source can result in fire, shock, or serious injury.
3. Motor will restart without warning after thermal protector trips. Do not touch operating motor; it may be hot enough to cause injury.
4. Do not place body parts or objects in fan or motor openings while motor is connected to the power source.
5. All electrical connections should be made by a qualified electrician.
6. These utility exhaust fans are for general purpose exhaust applications only. Do not use these exhaust fans in an area where corrosive or explosive materials may be found.
7. Follow all local and state/provincial electrical and safety codes in the United States and Canada, as well as the National Electrical Code (NEC) and the Occupational Safety and Health Act (OSHA) in the United States, and the Canadian Electric Code (CEC) in Canada.
8. Always disconnect power source before working on or near a motor or its connected load.
9. Protect the power cable from coming in contact with sharp objects.
10. Do not kink or create tight bends in the power cable and never allow the cable to come in contact with oil, grease, hot surfaces, or chemicals.
11. Make certain that the power source conforms to the requirements of your specific exhaust fan model. The fan frame and motor must be electrically grounded to a suitable electrical ground, such as a grounded water pipe or ground wire system.
12. To reduce the risk of injury to persons, please observe the following: In the United States, OSHA compliant guards are required when fan is installed within 7 feet of the floor or working level. In Canada, CSA compliant guards are required when fan is installed below 2.5 meters (8.2 feet) above the floor or grade level.

INSTALLATION AND OPERATION INSTRUCTION

All units are shipped fully assembled; no installation required.

OPERATING INSTRUCTIONS

1. Make sure the unit is placed on a flat surface
2. Keep the area free of objects that could impede air flow on both the intake and exhaust side of fan.
3. For proper exhaust operation, a window, door, or louver should be opened for fresh air intake on the opposite side of the area to be ventilated.
4. Turn the On/Off switch to engage fan

MAINTENANCE

- Shut off power before cleaning or maintenance.
- Wipe casing and impeller with care using a damp soft cloth or neutral detergent, ensure the motor or other electrical components does not come in contact with water
- Apply mechanical lubrication in machinery axle tree after ventilator has used more than 1000 hours to ensure longer use life for ventilator.

Do not depend on any switch as the sole means of disconnecting power when installing or servicing. If power disconnect is not visible, utilize OSHA lock out/tag out procedure.

Failure to do so may result in fatal electrical shock. Employ proper lock-out/tag-out procedures when performing maintenance.
