

WALL MOUNT GUIDE

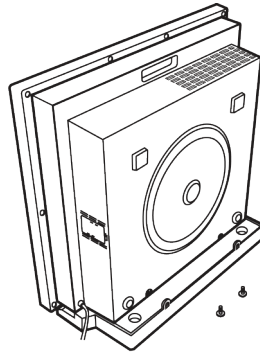

Hardware not included. Consult a hardware store or contractor for appropriate hardware for your specific wall type. The MinusA2 unit weighs 19.4 lbs.

LET'S BEGIN!

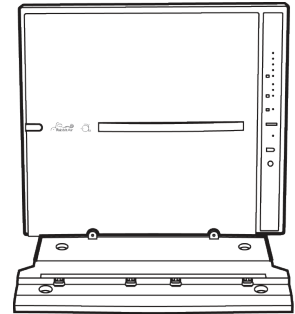

If you have any difficulty with, or questions regarding installation on your specific wall type, consult a contractor.

1. Remove the screws that secure the base stand to the unit.

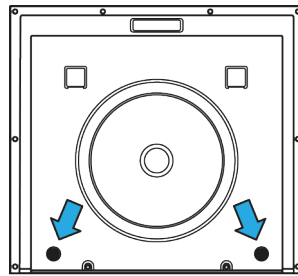

2. Push the unit forward, away from the base.

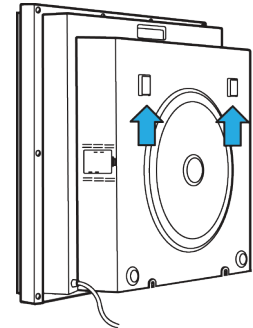

3. Once the base has been removed, store with the screws for future use.

4. Place the bracket on the wall in desired location. Use a level to assure correct placement. Make sure the hooks are facing up. Drive screws through the holes in the bracket. The necessary number of screws depends on wall type and construction.

5. Place the two included adhesive discs on the two small circles on the back of the unit.

6. Once the bracket has been properly affixed to the wall, slide the unit down onto the bracket's hooks slowly. Align the unit's bracket pockets with the hooks to assure a secure installation.

Take care not to jostle the unit forward, lower the unit vertically onto the bracket.

That's it, you're done!
Plug in your MinusA2 and get ready for fresher,
cleaner air.
