# VAF-12E

## Part # AF-O1T-D1A20148

VAF12E is a high-pressure, high-velocity air mover. It features a powerful 1 HP motor that pulls 7.1 amps and operates on a single speed.

The aerodynamic design of this axial fan yields very high airflow rates from a compact, lightweight package.

This unit can function as a freestanding air mover, and it can also be ducted to provide positive or negative airflow. Both the intake and exhaust ports of the air mover are ductable for positive or negative airflow.

The VAF12E is perfect for restoration jobs with long lines of ducting. This air mover can be placed in the ducting line and act as a booster to push wet air along. It's ideal for use with large restoration equipment, such as desiccant dehumidifiers.

### Specifications

- Voltage: 115 • Amps: 7.1 • Air Flow: 2000 CFM • Blade Size: 12" • Motor: 1 HP
